

CQG EIS Lead Consultancy

A Queensland owned regional consultancy CQG is fast becoming recognised as the consultant of choice for EIS projects within the Great Barrier Reef World Heritage Area (GBRWHA).

Traditionally CQG's role as the lead EIS consultant has been through word of mouth recommendations. Proponents have come to us to help them negotiate their way through the approval processes in a cost and time efficient manner.

Increase the likelihood of your EIS approval – engage CQG as the Lead EIS Consultant.

We are sought after for the role of EIS Lead Consultant because we have:

- Developed effective techniques for improving communication between authorities and our clients;
- Helped our clients develop innovative low impact solutions;
- Staff strongly committed to our clients' project outcomes;
- A company director who owns the business, and as such dedicates senior resources and delivers what the company commits to;
- Partnerships with other like-minded businesses who deliver quality services on similar scale projects;
- Excellent relationships with authorities and understand what they want in an EIS; and
- A strong company awareness of all the drivers that can impact on a project – economic, political, social and cultural to ensure help our clients proactively tackle and respond to issues that may pose a risk to approval.

CQG was the only consultancy to be invited by the government and UNESCO to present to the UNESCO/IUCN (International Union for Conservation of Nature) mission to Australia in 2012. CQG was also the only consultancy invited by one of our largest landowners and original custodians of the Great Barrier Reef, the Traditional Owners of North Queensland and Cape York to deliver their story and visions to the UNESCO mission.

CQG is uniquely positioned as the only consultancy with recent parallel EIS experience for three major projects in the GBRWHA. We have excellent working relationships with officers of the Federal Department of Sustainability, Environment, Water, Population and Communities (SEWPaC), the Great Barrier Reef Marine Park Authority (GBRMPA) and the Queensland Coordinator-General's office which assists in the smooth execution of major projects.
