

# Industrial Engineering

CQG provides a range of industrial engineering consulting services to Australian and international organisations. Our senior engineer has over 25 years' experience in a number of Australian industries including mining infrastructure, coal handling, solar salt, sugar milling, sugar refining, and timber processing.

Our technical and operational management skills are called upon to provide owners engineering support to a range of clients in the power generation, local government, development, industrial, minerals processing and mining sectors. With an experienced Chief Engineer and Operations Manager in the engineering team we can assist clients with feasibility studies, budgeting and all aspects of project management. Our staff can stand side by side with your engineering team to achieve your day to day operational goals or specific project outcomes.

**CQG's engineering team is ready to manage, organise and engineer your project. CQG offers you excellence in skills, experience and project delivery.**

## Some of our industrial engineering services include:
