

# Natural Resource Management

CQG Consulting's natural resource managers grew up on the land and ran their own grazing operations. We also have qualified agricultural scientists who are able to integrate a life-time of natural resource management with newly introduced technologies and best practice initiatives to design the optimum outcome for your project.

We work closely with landowners, government agencies, Natural Resource Management groups, the community and conservation groups, as well as Traditional Owners, to ensure our solutions allow sustainable development.

Our director (Patrice Brown) was appointed to the Board of the Sugar Research and Development Corporation (SRDC) by the Federal Government. During her six year term, Patrice worked with grower groups, researchers, mills and regulators to determine appropriate funding for natural resource projects in the sugar industry.

## **CQG can assist clients with various natural resource management disciplines including:**

- Ecological surveys;
- Agistment agreements;
- Development of farming management systems;
- Land management audits;
- Weed mapping and management plans;
- Land and water management plans;
- Data collation and interpretation;
- Monitoring programs;
- Sediment and runoff management;
- Property management plans;
- Pest surveys and management;
- Aerial photography of properties;
- Property Map of Assessable Vegetation Applications (CPMAV); and
- Development approvals (Clearing).

**Our ecologists and engineers have worked throughout Queensland on various land management projects, including weed and vegetation surveys, erosion control and land remediation.**
