

Contaminated Land

- Our team has suitably qualified persons (SQPs) under the *Environmental Protection Act (EP Act) 1994* (Qld) for contaminated land investigations
- We have conducted numerous land contamination investigations for mining, airfields, industrial sites, power stations, rail lines, dip sites, fuel storage areas, closed landfills and sites containing acid sulfate soils and successfully applied for removal of sites from the EMR

Proven abilities managing contractors and conducting investigations in remote areas
Adoption of innovation to reduce time and costs e.g. use of drones (UAV) for surveys and capturing spatial data, as well as non-invasive ground-penetrating radars

- Good working relationships with Third Party Auditors and the Department of Environment and Science
- Preparation of reports for review by third party auditors

Contaminated site investigations and remediation projects typically follow these steps:

Stage 1:
Preliminary Investigation

Stage 2:
Detailed Site Investigation

Stage 3:
Remediation

Stage 4:
Validation

Qualified and experienced land contamination specialists.
